

[CARABINERS]

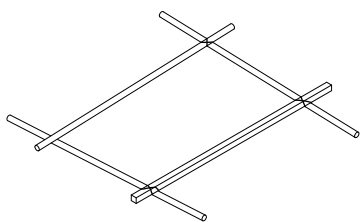

Lifting nets used for seating are attached to the modules using climbing carabiners

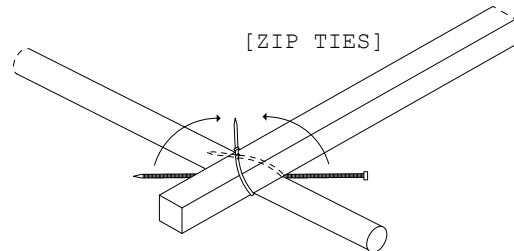

[ROPE]

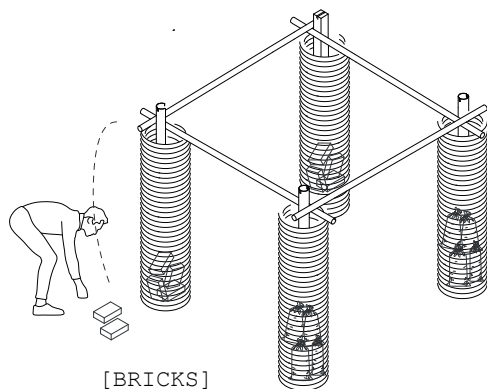

Vertical modules are secured with ropes threaded through pre-cut notches in the pipes, ensuring a tighter grip. The fastening is completed with a Fisherman's Knot.

[ZIP TIES]

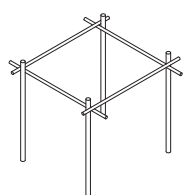

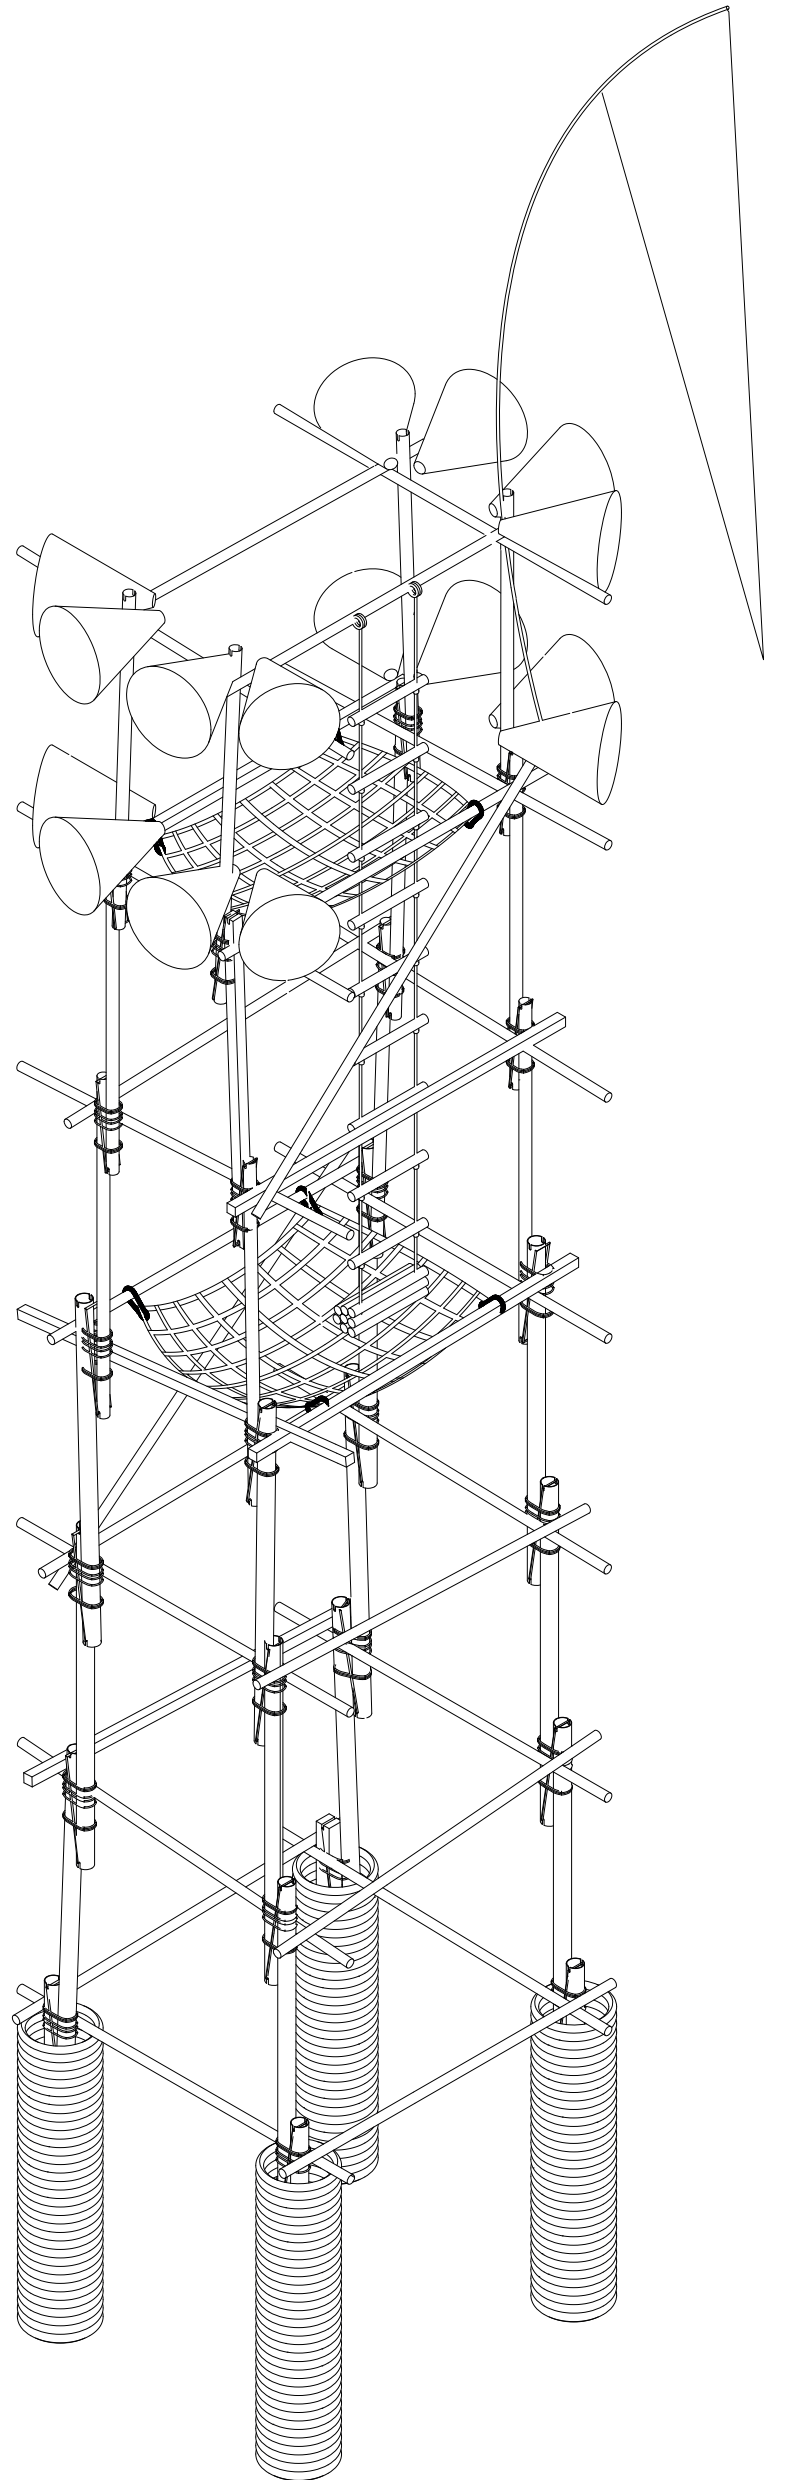

Horizontal module elements are secured with cable ties, forming a cross-joint with perpendicular structural poles.

[BRICKS]

[SANDBAGS]

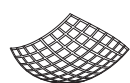

Larger-diameter pipes can serve as the base of the structure and act as formwork, filled with heavy elements to increase stability.
